With more than 10 years of experience and numerous successful orders to some of the World's largest pharma and biotech companies, we have achieved valuable references and expertise within design, planning, development and instalment of customized low temperature -40/-60/ -70 and -80 solutions which, with this new strategic alliance, will make us an even stronger and interesting supplier. Via the new partnership, we are now adding extra competences in the form of a large professional team with more than 40 service cars, of which some are permanently stationed abroad, refrigerator design engineers, PLC experts, electricians, project management and extensive and professional project management tools including GMP document management and after-sales service with the possibility of worldwide monitoring.

We are experiencing a global growth in the pharma and biotech industry, producing increased demand for innovative, reliable and dependable low temperature freezer storage solutions – also in large scale and with blast freezer solutions incorporated into the storage solution itself, which is exactly what the market is asking for and what Arctiko and Koelegruppen are looking for in Denmark and worldwide.

Our partnership is aimed at low temperature solutions; however, we are able to deliver overall solutions to anything ranging from smaller cold rooms and chillers to supersize cold rooms facilities, CO<sub>2</sub> central applications or heat pumps for process and production – all energy optimised with the latest technologies and if possible, with natural refrigerants.

Together, the partnership offer more than 80 dedicated employees with all the necessary special skills within design, development, project management, installation and after-sales service.

We look forward to the close collaboration with Koelegruppen A/S, enabling us to provide services at an even higher level to our customers in the pharma and biotech industry worldwide.

## About Arctiko:

Established in Esbjerg, Denmark in 2001.

Specialised in refrigerating and freezing for use in the health and life science.

Products: Everything within refrigerating / freezing for biotech, health, life science, labs, hospitals etc. from +10 to -150 degrees, in sizes from 15 litres to 60 tons refrigerating / freezer rooms.

Global export to + 100 countries through an extensive network of distributors.

ISO 9001:2008, ISO 13485 and MDD 93/44 certified.
